DETAILED ACTION

Double Patenting

1. Claims 6 and 7 are objected to under 37 CFR 1.75 as being a substantial duplicate of claim 5. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k). Note claim 6 would be a duplicate of claim 5 dependent on claim 1; and claim 7 would be a duplicate of claim 5 dependent on claim 3.

Information Disclosure Statement

2. It would be greatly appreciated if Applicant could provide a copy of Takateru Umeda et al. reference which was cited in IDS dated October 28, 2005. The PCT Search Report indicates Applicant's claimed invention cannot be considered novel in view of this reference; hence it would be critical to prosecution, and Examiner is unable to obtain a copy any other way.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 5,176,760 to Young (hereinafter US'760), Japanese patent 03-006362

(hereinafter JP'362) or Japanese patent 04-168273 (hereinafter JP'273) for the reasons set forth in the previous office action dated January 23, 2008.

Response to Arguments

5. Applicant's arguments filed April 21, 2008 have been fully considered but they are not persuasive. Applicant argued that prior art does not teach a carbon content of 0.01% or less as recited by the claims. It is the Examiner's position that prior art teaches a stainless steel, in general, and therefore would include ultra-low carbon stainless steels containing carbon in an amount of 0.01% or less that are commonly known in the metallurgical industry. Note the English abstract of Japanese patent 53149111 has been cited to further depict the state of the art in ultra-low carbon stainless steel alloys.

Allowable Subject Matter

6. Claims 6 and 7 would be allowable if Applicant cancels claim 5 to overcome duplicate claim objection.

7. The following is a statement of reasons for the indication of allowable subject matter: None of the cited references teach or suggest dehydrogenated ultra-low carbon stainless steel. The inventive step of dehydrogenating ultra-low carbon stainless steel is critical because it enables the steel to be used at higher temperatures, e.g. 400°C or higher as disclosed on line 24 on page 7 to line 6 on page 7 of Applicant's specification. Hence claims would patentably distinguish over prior art.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
